Filter Replacement Schedule

Proper fluid levels and clean filters are vital. In addition to the grit, dirt, and other foreign matter which enters the engine and transmission from outside air and other sources, your car also creates its own contaminants through condensation, chemical reactions, and wear.

Air filters, transmission filters, engine oil filters, and gas line filters all need to be replaced periodically to keep your engine running smoothly. All Automotive is your place to have your engine filters changed in Tacoma, Puyallup, University Place, Lakewood, Spanaway and other Pierce County towns and cities.

Some components will self-destruct if they are not protected by filters.

Here are six good friends for your car:

CRANKCASE VENT FILTER- Prevents dirt from entering the crankcase.

AIR FILTER- Keeps abrasive dust, dirt, bugs, and other foreign matter out of the carburetor air intake.

ENGINE OIL FILTER- Traps dirt, metal filings, and sludge, allowing only filtered oil to circulate through the engine.

TRANSMISSION FILTER- Collects dirt, and metal filings, protecting finely machined parts.

FUEL FILTER- Traps rust, sediment, dirt, and other particles which may enter the carburetor and clog tiny jets.

VAPOR CANISTER – Collects gasoline vapors from the fuel system and returns them to the carburetor.
